

Dear reader,

## **Do you want your business to excel at its' BIM process for design & engineering?**

Here's how you do it:

**Step 1: Get ISO-19650-2:2018**  
from <https://www.iso.org/standard/68080.html>

**Step 2: Read Chapter 4.**  
It's a half A4. And there's a simple picture describing 8 steps in there. If you want to know more about either of these steps, read the corresponding paragraph in Chapter 5.

**Step 3: Do what it says.**

In the first step it says that you should appoint individuals to be in charge of this. If your project is really difficult, or the people you are working with are, hire someone dedicated to this task.

And no, we don't offer that service. We're just providing free advice here.

**Whoever manages it, the plan keeps being the same: follow these 3 steps.**

The ISO organization put a lot of effort into assembling this standard. Anyone proposing something different is either an expert coming from a different angle or someone giving you smoke and mirrors... Which of the two it is, you must decide for yourself.

Best regards,
